

Restaurants, Night-clubs, Coffee Shops and more.

- **Noisy rooms that get louder and louder?** This is caused by “standing waves” where reverberated noise combines with other noise to get louder. The **HearClear® Acoustic Systems**, stop this. Rooms should be pleasant, not noisy, but alive. We condition the noise, and “tune” the room so you hear sounds you want to hear.
- **People can’t hear what others are saying?** When out to dinner, do you hear the guy behind you better than your companion across the table? Are you trying to read lips? Are you sometimes misunderstood? **HearClear®** will help voice clarity with our **Acoustic Privacy Soffits, Flats and Slants**.
- **Employees have trouble hearing your customers?** Are they reading lips? Do they ask customers to repeat orders? Are the customers getting upset? Our **Acoustic Soffits, Flats & Slants**, will condition frequencies to help understand the spoken word.
- **Aesthetics?** Our products combine acoustics with fine art. We work with your interior designers or directly with you to enhance your interior scheme as well as control the sound, check out our **Dolce’ Acoustics**, line of products.
- **Your customers like it loud, your neighbors don’t?** You want to keep the energy in your club, but not disturb your neighbors? The **BoomBuster® System** will keep the sound inside the club and reduce it outside. The artwork is up to you, panels, posters, are your choice. We can help you meet city noise codes.
